# DAFY TOKEN

## Daily Award For You

Do you want to be a lucky winner? Invest in \$DAFY!

DAFY or Daily Award For You is a giveaway centered cryptocurrency launching on the Binance Smart Chain!

Our team designed a special Giveaway Wallet looking to reward one lucky person every 24 hours.

Our holders are always rewarded and \$DAFY is 100% community-driven.

We aim to be the best giveaway centered coin that was ever launched on BSC and we will be able to achieve this with a lot of effort and help from you, our community!

# Financial Security

There is nothing that is more serious to us than making sure that your funds are in a trustworthy place designed only for the enjoyment of riding the waves of the market

With that, we've taken several measures to ensure that the tokenomics are transparent and that control is solely in the hands of the community:

- Ownership Renounced
- Liquidity Locked on DxSale
- No Mint Function
- No PreSale
- Little Devs Wallet

# Transaction Fees

## **Transaction Fees(slippage): 10%**

- 4% -> Giveaway Wallet -> Airdropping every 24 hours 20% of the Wallet to 1 Lucky Holder!
- 4% -> Liquidity Pool -> 4% of every transaction is going back to the Liquidity
- 2% -> To Holders -> Holders are also rewarded for holding DAFY, 2% is redistributed to every one of you whenever a transaction is being made.

# **Giveaway Informations & Rules**

## **Giveaway Informations**

- We will be hosting 1 giveaway every 24 hours
- We designed a special wallet supplied by 4% taxes on every transaction
- The prize is 20% of the Giveaway Wallet everyday
- We guarantee transparency on every giveaway and assure the winners are picked randomly.
- We will provide video proofs and will post every winner on our website!

## **Giveaway Rules**

- You will only be eligible to be picked as winner for the giveaway when you haven't sold any tokens for a day (24 hours)
- In top of that, you also need to hold at least 0.3 BNB worth of DAFY

# Token Distribution

# Total Supply: 1,000,000,000,000,000

## **45% Burned**

45% of the initial Supply (450 000 000 000 000 tokens) were burned at the start to create a BlackHole.

These tokens were sent to the dead address (0x00dead), effectively removing them out of circulation.

## **3% Development**

3% of the tokens have been airdropped to the developers for future development of the project. ( 1% for each 3 of us )

## **2% Marketing**

We designed a special Marketing Wallet so we can keep developing and providing the best marketing strategies for our community! Every transaction out of this wallet will be announced to the community!

# Token Mechanics

### **1T - max buy/sell order per Transaction**

This is an anti-dump/anti-whale system looking to prevent high dumps at once.

### **Reflection Mechanism**

As mentioned, 2% of every transaction is taxed and redistributed back to holders allowing for automating staking, also known as frictionless yield.

### **Automatic Liquidity Pool & Liquidity Locking**

Our smart contract taxes 4% on every transaction, either in or out, automatically converts it into liquidity that's being sent to the LP address that's locked on DxSale

# DAFY TOKEN

Best tokenomics to reward all of the  
holders of our token!
